

UNIQUE INNOVATION

G3+ ProGrip DEADMAN

ULTIMATE GRIP ON SAFETY AND BLASTING EASE

Discover the new way of safe and user-friendly blasting. The unique G3+ ProGrip offers blasting professionals a manoeuvrable and more comfortable grip on the deadman's control.

MORE SAFETY

due to the handy pistol grip + light trigger operation (with safety latch and trigger protection).

MORE CONTROL

on the blasting process due to the rotating pistol grip (and various accessories).

MORE EASE OF USE

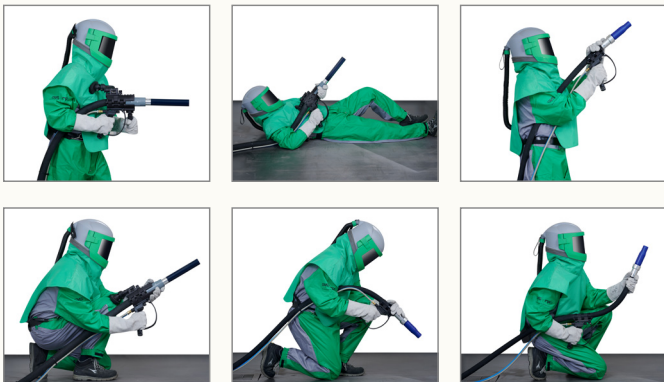

due to comfortable working position and maximum freedom of movement.

*This results in: 1. less fatigue 2. more production
3. better blasting results*

G3+ ProGrip

CUSTOMIZE THE G3+ PROGRIP COMPLETELY WITH THE VARIOUS VERSIONS AND OPTIONS

① The pneumatic or electric version makes the G3+ deadman's control suitable for blast pots with different control systems.

⑦a For intensive blasting work, the G3+ ProGrip is firmly clamped around the blast hose with the Rail System, but will still rotate flexible and easy.

② The Triple Strap Locking System ensures a firm and secure attachment to the blast hose. Thanks to the rotating properties, the handle can be used in a flexible and comfortable way.

⑦b The included Thrust Pad transfers the thrust from the blast nozzle to the body. This prevents fatigue and increases comfort, safety & productivity.

G3+ ProGrip Rail & Thrustpad

③ The ergonomic trigger with safety latch prevents unintentional activation.

④ The Trigger Guard offers extra protection.

⑤ The rubber bumper protects the handle's underside.

⑥ With the Abrasive Cutoff (ACO) version, the supply of abrasives can be switched on or off so that the objects can be efficiently blown clean after blasting.

The optional Side Grip can be placed in different positions for optimum grip and comfort.

The optional lighting works exactly in line with the nozzle. This means that the blasting area is always perfectly illuminated. This prevents poor blasting results due to shadowing and greatly improves working in dusty and/or dark areas.
