

"Based upon Gritco's high quality standards, extensive experience and know-how the MiniPro Blast Pot Series is designed as a compact, economical but professional alternative for less than full time blasting use with ultimate results."

COMPACT BLASTING POWER

VERSATILE AND ECONOMIC APPLICATIONS

Despite its compact dimensions, the MiniPro-Basic is a mature blasting machine offering many of Gritco's high-quality advantages. The machine is often used for "basic" blasting work like rust and paint removal. Due to the accurate pressure setting and abrasive metering, the MiniPro-Basic can also be deployed for more delicate work.

POWERFUL BENEFITS

- Easy adjustable abrasive amount settings
- Reduced dust by wet/vapour blasting possibilities
- Easy adjustable pressure settings

BETTER BLASTING VALUE

- Accurate metering valve for less use of abrasives
- (Spare) parts can be easily removed for quick maintenance

QUALITY INCLUDES

- Wear resistant metering valve handles all abrasives
- No risk of abrasives entering the 'air section' because of separate decompression valve
- Completely safe according to European Directive PED 2014/68/EU

ENVIRONMENTALLY FRIENDLY

- Reduced waste and environmental pollution (dust) because of precise abrasive metering

COMPACT PROFESSIONAL BLASTING SOLUTION WITH PRECISE ABRASIVE DOSAGE

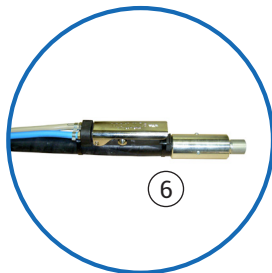

It is not without reason that the MiniPro-Basic is a contractor's favorite for many blasting projects. In addition to its compact dimensions, the high-quality construction and precise dosing options make the MiniPro-Basic a compact, but fully-fledged alternative for many blasting disciplines.

WHAT MORE MAKES GRITCO MINIPRO-BASIC YOUR PERFECT BLASTING CHOICE

- ① Easy abrasive (re)filling with the automatic, **self-closing filling assembly** with integrated **sieve** and **flip cover** on top of the machine.
- ② As the **decompression valve** is separated from the air section of the blast pot, no dust or abrasives can penetrate the air fittings. This eliminates the chance on malfunctions and makes for a long lifetime of the blast pot.
- ③ The standard **regulator valve** makes adjusting the right blasting pressure possible. This is important for getting the required blasting results and to avoid damaging the substrate. Enhanced, trouble free blasting is obtained by the **inlet filter**. This filter removes final moist and residues from the compressed air.
- ④ Reduced use of abrasives and dust production because of the accurate setting possibilities of the **metering valve**.

MEETING YOUR EXACT BLASTING NEEDS BY IMPLEMENTING ONE OR MORE OF THE MANY GRITCO OPTIONS. FOR EXAMPLE:

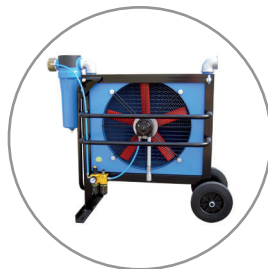

- ⑤ A hose package optionally with **pistol grip blast gun** or the contractor's favorite, robust **G2 dead man's control**
- ⑦ Less dust by **wet/vapour blasting** possibility at the nozzle
